EAGLEO

Abstract

Founded in March 2019, Eaglecoin Foundation develops the first Blockchain solution for the global Medical and Solar industry. Driven by a vast community of progressive doctors, software developers, marketing specialists, and Solar Energy Experts. The Foundation has managed to create a new medical and solar energy ecosystem that favors all industry stakeholders.

Through a common, industry-specific cryptocurrency Eaglecoin and several Blockchain-based software tools, all market participants are securely interconnected, empowered to efficiently exchange information and values.

The core purpose of the Foundation is to improve long-term health, reduce costs and pain, and continuously support the growth in the value of the Eagleo currency.

Eaglecoin develops the Medical and Solar Energy industry as well as creates market intelligence through a cryptocurrency reward system that inspires participation throughout the community.

Looking forward, Eaglecoin expects the platform to drastically improve medical health & hygiene habits, also by supporting Solar Energy production; we will help our world to survive more. (which has the least negative impact on the environment compared to any other energy source.)

E A G L E O

Introduction

The purpose of this paper is to thoroughly explain a new conceptual framework to be used within the Medical and Solar industry for organizational purposes. Through the utilization of recent technological innovations, we have created a model with the ability to overcome the majority of the Medical and Solar industries' major constraints.

Eaglecoin strives to create a medical industry community and Solar energy Production by rewarding people -who provide valuable contributions- with cryptocurrency. Through this reward system, the foundation will see a rise in a currency that will be able to reach a broad market, including a vast number of people who have yet to participate in any cryptocurrency economy.

According to Harvard Business Review: "To protect the blockchain vision from political pressure and regulatory interference, blockchain networks rely on a decentralized infrastructure that can't be controlled by any one person or group."

The integration of blockchain and the medical & Solar industry is an extraordinary concept; one that requires the creation of a community in which transparency and shared responsibility can take place.

E A G L E O

Mission Statement

The Eaglecoin Foundations' core missions are to improve the quality of medical care worldwide, reduce treatment costs and create a medical community and also produce solar energy which is more of the requirement of the modern world. The Eaglecoin Token is created to assist the Eaglecoin Foundation with the above-mentioned missions by giving power to the people. Eaglecoin focuses on developing several tools, each one targeting a different sector of the medical and solar industry. Individuals who use and implement these tools will receive Eaglecoin Tokens as a reward, which they can later use to pay for their medical treatment or to purchase medicine.

The goal is not to compete with other cryptocurrencies, but rather to provide a solution and support for the healthcare and solar industry through a blockchain. The Eaglecoin Foundation is interested in evaluating the actual substance and value that can be created with a coin (Eaglecoin) that represents the health of all individuals. Eaglecoin will be both a FinTech and logistic platform of the global medical and solar industry.

The Foundation's exact contribution in ERC20 coins (Eaglecoins) is used for medical and solar projects that will be provided later in the whitepaper.

Core Objectives

All industries aiming at long-term success are driven by their customers. The healthcare and solar Industry are no more exception. No regulatory authority, no central institution, no powerful organization or individual could control the industry better than the customer's community. People trust people, thus there is nothing more valuable to the industry players than constant, trustworthy feedback from the customers. However, a community needs to exist for this to be achieved and this is where Eaglecoin steps in.

Eaglecoin emphasizes the industry's challenges and reveals the solutions for increasing the medical practice's efficiency and solar energy production. Implementing a blockchain-based industrial cryptocurrency can incentivize the industry in solving the majority of the existing and future constraints. Below are the phases of implementation each with its own milestones, goals, and focus.

Project Development Phases

Phase I : Blockchain-Based Medical Services

Through creating and implementing the first Blockchain-based platform for trusted medical Services, the Eaglecoin Foundation will allow patients to pay to doctors by Eagleo coin.

At this moment in time, Eaglecoins' developers are working on the frontend, the address database, and the smart contract. This platform is already presented in the market despite the fact that the ICO only takes place in June 2020. Once the ICO begins the market offensive strategies and the advertising campaigns for the global expansion will be implemented and create a rapidly growing community of patients and doctors.

All the medical services like doctors, Pharmacy and Insurance can be provided under the belt of the Eagleo coin. All essential services will be covered.

By providing ways to earn and spend Eaglecoin, the medical currency will be distributed throughout the industry. Furthermore: Eaglecoin collects important knowledge of the industry and makes it available to all doctors and patients, thus allowing doctors and patients to form strong communities around the world and build upon mutual interest.

E A G L E O

Phase II: Solar Project

Eagleo Foundation is looking to establish a solar project for Green and Clean Energy by funding solar projects. By doing so we are enabling our future bright.

Solar energy is the most abundant energy resource on Earth. It can be captured and used in several ways, and as a renewable energy source, is an important part of our clean energy future.

The sun does more than for our planet rather than just providing light during the daytime – each particle of sunlight (called a photon) that reaches Earth contains energy fuels our planet. Solar energy is the ultimate source responsible for all of our weather systems and energy sources on Earth, and enough solar radiation hits the surface of the planet each hour to theoretically fill our global energy needs for nearly an entire year.

Where does all of this energy come from? Our sun, like any star in the galaxy, is like a massive nuclear reactor. Deep in the Sun's core, nuclear fusion reactions produce massive amounts of energy that radiate outward from the Sun's surface and into space in the form of light and heat.

Solar power can be harnessed and converted to usable energy using photovoltaic's or solar thermal collectors. Although solar energy only accounts for a small amount of overall global energy use, the falling cost of installing solar panels means that more and more people in different places can take advantage of solar energy. Solar is a clean, renewable energy resource, and figures to play an important part in the global energy future.

We are creating great value for our Eagleo Currency. The solar energy project is very cost-effective and efficient, so it will give a high return on investment.

E A G L E O

Phase III: Surgical Equipment Import

As we have decided to focus on the Medical industry, we are also looking to upgrade the quality of Surgical Equipment. As surgical equipment is much more important because more and more people require many types of surgery, so we have decided to import high-quality equipment.

For the individual who is not familiar with surgical instruments, or even lacks basic knowledge of the instruments and their uses – it may seem to be a challenging task. Most people have little experience with surgical instruments. The names are difficult; the differences may seem minuscule, and the uses for each instrument even more obscure. The beginner may easily feel intimidated without a proper introduction to the field.

We will achieve this position by passionately pursuing excellence and by dedicating ourselves to improving the quality of life of everyone who interacts with us, particularly those individuals who rely on our products to heal and to cure.

As such, we are committed to "raising the bar" in every aspect of the business, from customer service to product development. With regard to instruments, this commitment takes the form of superior products that perform impeccably. In order to provide surgeons with the tools they need to operate with the utmost skill and confidence, we have introduced an Instrument Certifying Process that is second to none in the industry.

Instrument making is a highly developed craft, and the craftspeople who make surgical instruments are the modern heirs to this ancient art. It is also a vocation that has respected its traditions over the centuries. So, while new techniques have kept pace with advances in surgical practices, the essence of the craft has changed very little. Today, computers and other advanced technology aid in the manufacture of instruments, but it remains with the skills of gifted instrument makers that turn raw steel into the finely honed tools...ready for the surgeon's hand.

Phase IV: Real Estate

The benefits of investing in real estate are numerous. With well-chosen assets, we can enjoy predictable cash flow, excellent returns, tax advantages, and diversification—and it's possible to leverage real estate to build wealth. So we have decided to invest in real estate? Here's why real estate is considered a good investment.

KEY TAKEAWAYS

Real estate investors make money through rental income, appreciation, and profits generated by business activities that depend on the property.

The benefits of investing in real estate include passive income, stable cash flow, tax advantages, diversification, and leverage.

Real estate investment offers a way to invest in real estate without having to own, operate, or finance properties.

Cash Flow

Cash flow is the net income from a real estate investment after mortgage payments and operating expenses have been made. A key benefit of real estate investing is its ability to generate cash flow. In many cases, cash flow only strengthens over time as you pay down your mortgage—and build up our equity.

Another benefit of investing in real estate is its diversification potential. Real estate has a low—and in some cases negative—correlation with other major asset classes. This means the addition of real estate to a portfolio of diversified assets can lower portfolio volatility and provide a higher return per unit of risk.

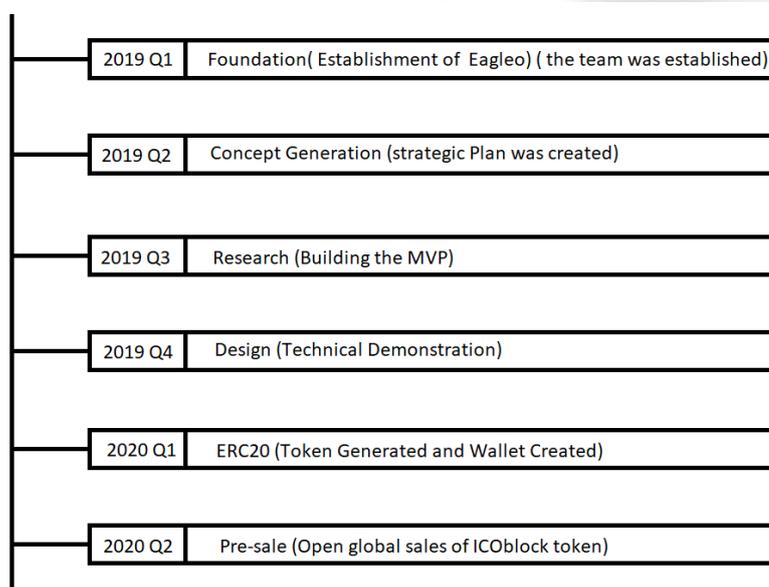

The inflation hedging capability of real estate stems from the positive relationship between GDP growth and the demand for real estate. As economies expand, the demand for real estate drive rents higher. This, in turn, translates into higher capital values. Therefore, real estate tends to maintain the buying power of capital by passing some of the inflationary pressure on tenants, and by incorporating some of the inflationary pressure in the form of capital appreciation.

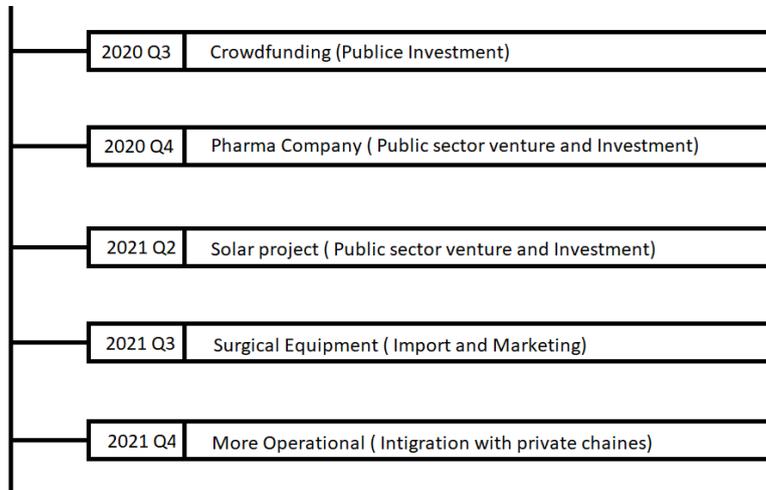

Roadmap

This section aims to explain the different phases of Eaglecoin where it intends to progress over the next few years, and the various milestones connected with each phase Eaglecoin wishes to achieve for the users, developers, and the industry overall. In total, there are 4 phases, namely: Knowledge, Expansion, Determination, and Eternity.

Each phase and its corresponding milestones, goals, and focuses are set out below.

- 1) Knowledge - Gather the required market data, using a blockchain-based review network to create a global, growing database.
- 2) Expansion - Create a global community and motivate the participants to make use of the EGL currency.
- 3) Determination - Implement a decentralized insurance model.
- 4) Eternity - Build up EGL infrastructure for direct international trading.

The first major step after the release of the Eaglecoin token on March 15th was the establishment and registration of the Eaglecoin Foundation.

There are no obligations of any kind of token-holders towards the Foundation. Neither is there any obligation of any kind whatsoever on the part of the Foundation towards token-holders.

The public presale commenced on the 15th of June, 2020 (during which 12000000 EGLs' will be distributed) and the gathered funds will be used to create a team of front and back end teams for further projects.

During 2019 the Foundation plans Medical and Solar Energy production for a better future.

The Eaglecoin Foundation was the first to develop a solution in the blockchain for the Medical and Solar industry has the potential to be the market leader in this industry.

The Strength of Eaglecoin

The Eaglecoin Foundation recognizes that the value of all user contributions (reviews, recommendations, rewards, payments, trusted feedback, etc.) is one of the most important assets to the foundation. A single review is worth next to nothing, but millions of trusted and impartial reviews are worth many millions (or possibly even billions) of dollars.

Individuals should be paid for everything they do that brings value not only to Eaglecoin but also to the Medical and Solar Energy industry.

The transfer of ownership will take place in 2020 Q3 once the purchase price had been decided. This transaction will be phenomenal since the calculated purchase price will be huge.

Possibility of Indirect Profit Sharing

Once a year, there is a possibility that the Eaglecoin Foundation will be able to change back the Eaglecoin tokens from the market for Ether or Bitcoin with up to 50% of the operating profit. This will have the effect that the global EGL supply decreases.

On the other hand, the Eaglecoin Foundation may use 50% of the operating profit to reinvest into the tools that are being developed by the Eaglecoin Foundation.

The decision on how to use the resources - including any profits and liquidation proceeds - will be only and at every time in the hands of the management of the foundation. The operating profit includes interests from assets, profits of the clinics bought by the Foundation, and any other return on investment.

Token Creation

There are 110,000,000 (One Hundred Ten million) coins pre-mined. An “EGL” refers to one individual Eaglecoin and because it is an ERC20 token, it is configured to be used globally by all individuals, and its value is derived from the exchange with Ether.

Token Sales

As for now (21/12/2020) the following sales steps have been planned:

- ✓ June 15, 2020 - Public Presale –I
- ✓ July 5, 2020 Public Presale –II
- ✓ July 26, 2020 Public Presale –III
- ✓ December 23, 2020 Public Sale with Network Marketing

Hard-capped volume :

50 000 000 EGL

Price:

0.1 USD / EGL or

10 EGL / USD

Funds allocation:

- 1) Creating a team of front and backend.
- 2) Programming and launching medical services.
- 3) Programming and launching the supporting tools.

Price:

It will be decided later

Funds allocation:

- 1) Creating a team of insurance specialists, doctors, and pharmacists.
- 2) Launching the Solar Energy Project
- 3) Initial Global Communication Campaign for acquiring partners and multipliers.

Payments Handling

Medical practice today is a growing, high-tech oriented, 5000 billion USD industry. Eagle coin is the first and only crypto coin created as a payment method in the medical industry worldwide.

The Eaglecoin Foundation will implement a state channel payment method. This method operates similarly as to how payments of cheques are handled. In simple terms, a person (the benefiter) can receive a check from a bank account holder as a means of payment.

For the payee to receive the amount of money promised on the cheque, the issuer's name and benefiter's name must be written on the face of the cheque, the amount and currency specified and it should be signed (authorized) by the bank account holder. If all conditions are met, this cheque order becomes exchangeable at the bank for the amount of money promised. The exchange, however, may not be completed due to insufficient funds in the issuer's account and hence denied.

The transfer of Eaglecoin (EGL) operates in a similar manner to the above-mentioned example. Upon the wishes of one user (X) to obtain services or goods from another user (B), the exchange will happen when X promises B that payment in the form of EGLs' will take place upon the transfer of goods/ completion of services from B. Once B has fulfilled their obligation, a request by B will be made and the smart contract will carry out the request by means of transferring EGLs from Xs' account into B's account. History of all transfers will be stored in the ledgers of both parties and the balance for each account will be present in the contract state. Users may request to send tokens from their wallet to any Ethereum wallet through a smart contract.

E A G L E O

Smart Contract

Ethereum allows the running of decentralized code in conjunction with smart contracts, enabling reliable services and payment handling. 'Smart Contracts are a central component of next-generation blockchain platforms.'⁵ Due to the contracts' self-executing nature, single party manipulation is averted because control over the execution of the smart contract does not fall into the hands of a single party. Hence, it could be said that smart contracts provide autonomy, trust, speed, and safety.

Eaglecoin smart contracts are computer protocols in the Ethereum blockchain that facilitate, verify, negotiate, and conclude contracts between individuals and their contracting parties. More information on the smart contract code will be provided later on in the whitepaper.

Due to these smart contracts holding value, as mentioned earlier in this whitepaper, individuals may participate or audit all Eaglecoins' smart contracts on Github.

All smart contracts are connected to one "super-smart contract"(SSC) but don't lose their rights. If a smart contract cannot be fulfilled due to performance impossibility (death), then the SSC saves the patients' rights!

Thanks to the trustworthy nature of smart contracts, many of the industry problems can be mitigated or extinguished.

Eaglecoin ERC20 Standard token contract

The core contract is an extended version of the Standard Ethereum token contract (ERC20). You can explore and prove it on <https://etherscan.io>

Token Contract extensions

- Automated transaction fee handling

Eaglecoin owners need not worry about transaction fees (gas) in ether. It is necessary for Eaglecoin holders to hold any ether in order to send and receive EGL due to the fact that all fees are automatically deducted from the receiving amount (in EGL) that is received by the receiver.

This transfer functions due to the upcoming Metropolis Ethereum hard fork which might be updated to handle token fees internally.

```
function transfer(address _to, uint256 _value) returns (bool success) {  
    if (_value < EGLForGas) throw;  
    if (msg.sender != owner && _to == EaglecoinAddress && directTradeAllowed) {  
        sellEaglecoinsAgainstEther(_value);  
        return true;  
    }  
  
    if (balances[msg.sender] >= _value && balances[_to] + _value > balances[_to]) {  
        balances[msg.sender] = safeSub(balances[msg.sender], _value);  
  
        if (msg.sender.balance >= minBalanceForAccounts && _to.balance >=  
minBalanceForAccounts) {  
            balances[_to] = safeAdd(balances[_to], _value);  
            Transfer(msg.sender, _to, _value);  
            return true;  
        } else {  
            balances[this] = safeAdd(balances[this], EGLForGas);  
            balances[_to] = safeAdd(balances[_to], safeSub(_value, EGLForGas));  
            Transfer(msg.sender, _to, safeSub(_value, EGLForGas));  
  
            if(msg.sender.balance < minBalanceForAccounts) {  
                if(!msg.sender.send(gasForEGL)) throw;  
            }  
            if(_to.balance < minBalanceForAccounts) {  
                if(!_to.send(gasForEGL)) throw;  
            }  
        }  
    } else { throw; }  
}
```

- A Buy-and-Sell function for Presale, ICO and future Crowd Investing Eaglecoin implemented two additional functions that allow sending EGL or ETH to the token address in order to easily sell and buy Eaglecoin (EGL) to/from the Foundation.

Allocation and supply

There are two ways people can get involved with a crypto-currency:

- 1) Purchase the cryptocurrency.
- 2) Earn via work.

In both cases, users are increasing the value of the currency.

If people can earn money by working for one another then they will increase its value through mutual exchange facilitated by a fair currency system –that is exactly the model through which Eagleocoin operates.

As a custom token and a solution, specially designed for the global medical industry, Eagleocoin has a highly promising future.

As per the report from our partner clinic, which has already implemented the use of EGL as means of payment, it is clear that the majority of the medical industry will easily adopt this business model.

The unlock and potential distribution of 50% of the coins between 2020 and 2042 is planned as follows:

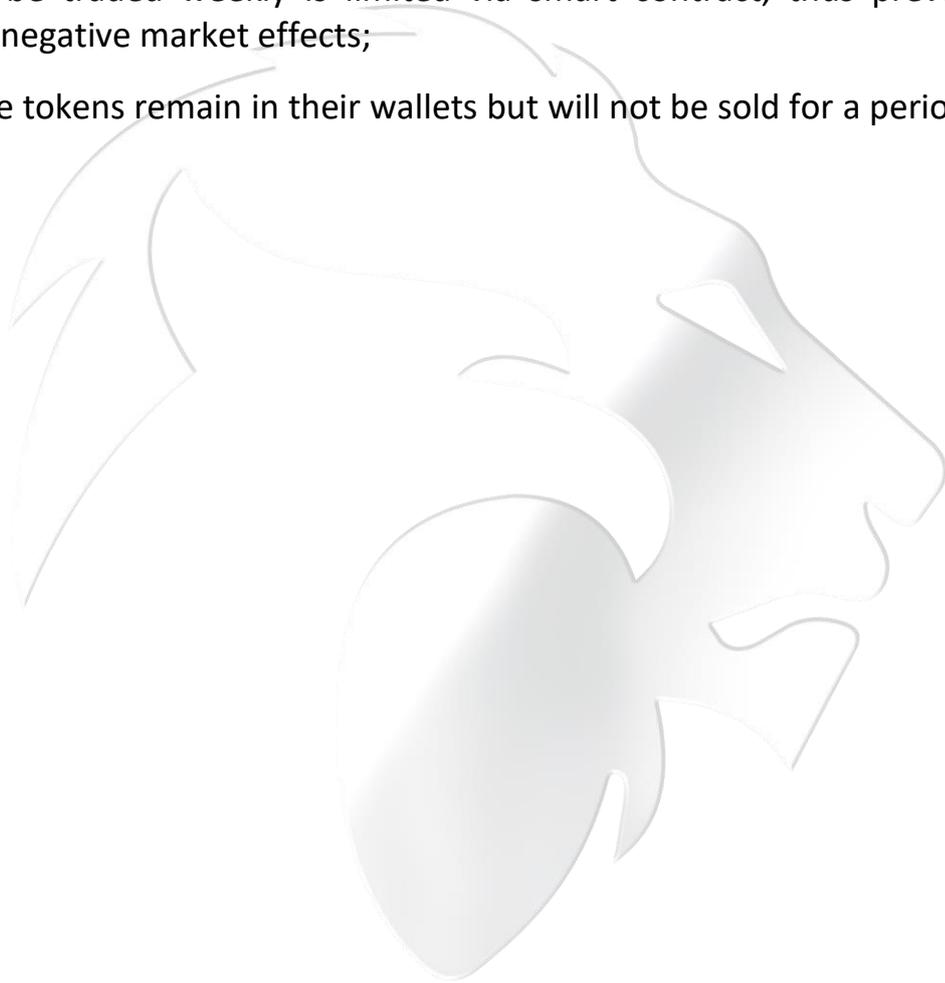

The total EGL supply allocation is planned as follows:

Locked amount	96.20%
TimeLock contracts (distribution 2020-2042)	76.1%
Coin option plan	5.0%
Founders	5.0%
ICO (locked until 15.06.2020)	3.0%
Foundation – future needs (after 2042)	4.1%
Eagleoprime International plc. – bonus (if the targets are fulfilled in 8 years)	3.0%
Unlocked amount	3.8%
Presale	1.0%
Eagleoprime International (purchased in EGL)	0.4%
Core team members	2.4%

All coins owned by the Founders are locked in Time-Lock contracts for 5 years.

The tokens owned by core team members and advisers are divided as follows:

- 50% of the tokens are transferred to a mutual account, where the amount which can be traded weekly is limited via smart contract, thus preventing potentially negative market effects;
- 50% of the tokens remain in their wallets but will not be sold for a period of 5 years.

E A G L E O

Fundamental Price

NB: For the calculations shown below, the difference between the fundamental value of the Eaglecoin Foundation and the market value of the Eaglecoin Foundation must be understood.

Both of them are expressed in either EGL or \$ USD, but their meaning and worth for investors and traders are individually very different.

The calculated fundamental value (real value) of the Foundation remains almost unchanged throughout the development of Eaglecoin since it is bound to the size of the community and the value per user within the community.

The market value can undergo typical market fluctuations and depends mostly on the demand for EGL.

Respectively the calculated fundamental price does not influence the market price (trading price).

The market price per EGL is expected to exceed the real value over time. For further information please read the next chapter: Market Development Steps.

Table comparison: Calculated fundamental value of EGL compared to the planned ICO price of EGL (June 2020)

Calculated fundamental value of the Eaglecoin foundation per EGL	Planned price of EGL during the ICO in June 2020
\$ 0.12	\$ 0.01 (100 EGL per USD)

From the numbers above it can be seen that the fundamental value of the Eaglecoin blockchain concept is higher than its planned ICO price. The value of the EGL is a calculated fundamental value for the Eaglecoin blockchain concept on the basis of its business plan.

E A G L E O

Market Development Steps In focus

1. Short-term (5 years): The First 3 global campaigns are to generate 0.1% of the target market share.
2. Medium-term (10 years): Reaching 1% of the target market through the developed Health Database, Eaglecoin Insurance, and Trading Platform.
3. Long-term (25 years): In the planned rollout period 10% of the target market share will be reached.

The calculation of the future value is based on the number of Eaglecoin wallets created. Within the first 3 stages of its development, Eaglecoin Foundation aims to achieve a market share of 10%. In the global medical industry, this 10% market share means 600 million patients and 2 000 000 doctors (12.5% of all doctors), using the Eaglecoin value-creating tools. 10% of the market share, with a corresponding rate of USD 60 per patient and USD 600 per dentist, a company value of approximately USD 36.12 billion is generated. (USD 3.6 billion per 1% market share).

E A G L E O

Funding

Funds raised during the ICO will be used solely for the development of the Eaglecoin network. The following distribution of funds is preliminary and can be subject to change.

- **Core Development – 10%**

Core development will involve the development of the technology as described in this document. This includes the integration of VPN protocols, smart contract systems, supporting security protocols and services, end-user applications... etc.

- **Operational – 60%**

This covers the necessary costs incurred for a functional system. This includes hosting and infrastructure costs, staffing, outsourcing, management, and other related expenses.

- **Marketing and Sales – 20%**

Marketing costs will be used for partnership development and direct consumer marketing. Sales costs will largely be incurred through direct B2B sales.

- **Legal and Compliance – 5%**

There are legal costs associated with privacy protection and registrations with regulators. The legal costs might vary from region to region.

- **Charity – 5%**

Charity is essential and therefore meant to be done for public benefit, relief and to assist people at times of need in any part of the world, especially who are the victims of war, natural disaster, catastrophe, hunger, disease, poverty, orphans by supplying them with food, shelter, medical aid, and other fundamental needs.

Reward Models

“In the future, more and more things we do (passive or active) are going to get compensated by a token of some sort. In the same way, today governments are issuing money, in the future companies will be issuing tokens to carry that value to a function that they have, or a product of their specific offering.”, William Mougayar at Ethereum Summit 2017.

Individuals should be compensated for both business works completed and effort and time used when providing businesses with valuable reviews and feedback (due to the fact that reviews and client feedback can possess extremely vital information that businesses will utilize to their benefit).

As William Mougayar (@wmougayar), the author of The Business Blockchain said during the Ethereum Summit 2017, “We all have 3 jobs today: the job that we get paid to do at an office; the 2nd job is taking care of ourselves and our family and household, and the 3rd job has been given to us by another company for using their services – renting a car for example. All kinds of jobs have been given to us, without us getting compensated (paid) for them.”

This is not a new concept. The token economy is a reward system used to reward target behavior. Many schools and kindergartens work with some sort of rewards (tokens, stickers, or other forms of points) to encourage positive behavior in children. Tokens are also applied in all sorts of games, where players receive a reward upon achieving a certain stage, marked as a target by the game creator. A token economy can be seen in every workplace whereby each person who goes to work gets rewarded upon achieving the goals that are set by the business, and in return, they get paid. More often the payment is in the form of fiat currency, such as euro, dollars, etc. There are often additional rewards, in the form of lunch allowances, gym memberships, travel costs, and paid annual leave. This also adds up to the remuneration that people receive by going to work. Individuals are all very much aware of the token economy and are active participants within it.

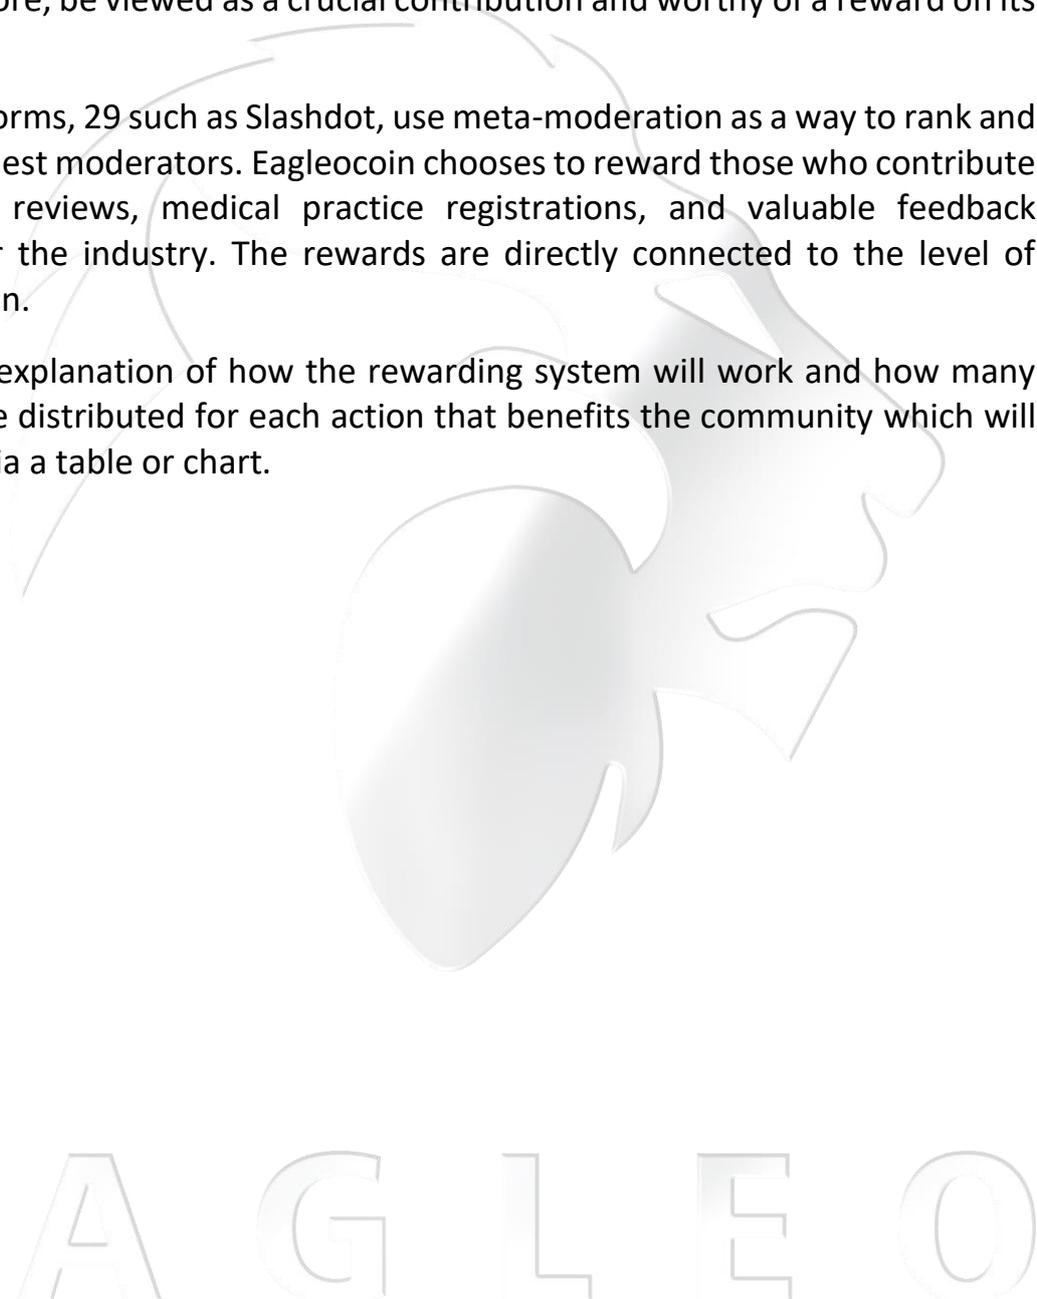

People should get paid in different currencies (tokens) depending on how much value they have added to each company. This makes all individuals collaborators of a company, without having a civil contract. People can have 10 different jobs where they dedicate different amounts of their time, so it is quite fair to get paid for each hour of the time that is given to a business. Thus, no individual will have to depend on a single employer, but on many different employers, who benefit from the time and effort of people dedicated to their business.

The Eaglecoin Token was created to help the Eaglecoin Foundation to improve the medical Industry globally, by giving power to the people (In this case- the patients).

Review input from community members is critical for Eaglecoin to accurately allocate payments to contributors. Reviews and medical practice registrations can, therefore, be viewed as a crucial contribution and worthy of a reward on its own.

Some platforms, 29 such as Slashdot, use meta-moderation as a way to rank and reward honest moderators. Eaglecoin chooses to reward those who contribute to trusted reviews, medical practice registrations, and valuable feedback content for the industry. The rewards are directly connected to the level of participation.

A detailed explanation of how the rewarding system will work and how many EGLs will be distributed for each action that benefits the community which will be added via a table or chart.

E A G L E O

Conclusion

In conclusion, an industry-specific cryptocurrency (such as Eaglecoin) could significantly reduce the industry-specific costs, lead to economies of scale, and provide quality services to people from lower-income groups. As more and more people earn Eaglecoin (EGL) and use them in various ways, the value of the cryptocurrency will rise, giving more freedom to the community.

Indeed, the idea behind Eaglecoin is revolutionary but it is also inevitable. There is an obvious solution to the problems of various industries and it's just a matter of time until communities implement EGL and reap the benefits thereof.
